

Release Notes

SQLDetective 5.0.1 (build 159)

IMPROVEMENTS

- **Object Navigator**
 - Added the ability to customize the behavior of Ctrl+Click for database objects.
 - Added new options to “Preferences > Code Editor > Ctrl+click on an object”:
 - “Located it in Object Navigator”
 - “Opens it in Object Wizard”
 - “Opens it in Describe Object”
- **Preferences**
 - Increased the object name length to 128 characters.

BUGS FIXED

- **Core**
 - Fixed fetching of LONG fields and extraction of DDL triggers and views.
- **Query Dataset**
 - The error “Out of system resources” no longer occurs on trying to run SQLDetective in trial mode when “Query All Records” is enabled.
- **Dataset/Datagrid**
 - Unicode symbols are no longer broken on inserting/updating LONG fields.
- **Code Analyzer**
 - A naming rule violation is now triggered for sequences in PL/SQL.
 - A naming rule violation is now triggered for sequences on changing the NEXTVAL/CURRVAL keywords case.
