

Release Notes

SQLDetective 5.1.1 (build 160)

IMPROVEMENTS

- **Code Explorer**
 - By default, the Code Explorer panel is now always open in the SQL Editor and Stored Program Editor.
 - It is now possible to toggle the visibility of the Code Explorer panel for each module separately.
 - The “Code Explorer” page was removed from Preferences.
 - Added the “Toggle Code Explorer” command to the SQL Editor, Stored Program Editor, and Trigger Wizard pop-up menus.
- **Text Editor**
 - When there is no text occurrence of the searched text in the code, the user is no longer prompted to start searching from the top.
- **Online Support Desk (=OSD)**
 - Added the ability to reply to OSD messages from the “OSD Preview” window.

BUGS FIXED

- **Code Explorer**
 - Toggling the visibility of the Code Explorer panel in the Stored Program Editor no longer affects the SQL Editor and Trigger Wizard.
 - The Code Explorer tree is no longer empty on first opening of the script.
- **Schema Compiler**
 - An access violation error no longer occurs after compilation is completed.
- **Schema Extractor**
 - The object list in the Schema Extractor is no longer empty.
- **Main Window**
 - When the “Show active session window only” option is enabled, objects of inactive sessions are no longer shown in the taskbar pop-up menu.
- **Object Wizards**
 - The “Compress data” check box no longer appears unavailable (grayed out) in the Index Wizard, Materialized View Wizard, Materialized View Log Wizard, Tablespace Wizard.
- **User Wizard**
 - The “Account Lock” check box no longer appears unavailable (grayed out).
